- Sniffing → data just can show. Can't modify. <mark>Wireshark</mark> software use for sniffing.
- Linux Command:
  - Open Terminal: type <mark>wireshark</mark>. Then enter <mark>eth0</mark>
  - Apply a display filter:
    - ip.address(also ip.addr) ==10.0.2.15 [display my pc package source and destination]
    - ip.src==10.0.2.15 [only source]
    - ip.des==10.0.2.15 [only destination]
    - here 10.0.2.15 my Linux ip address.
  - In Linux terminal:
    - Use <mark>ifconfig</mark> to show ip address.
    - Ip address show like inet 10.0.2.15
  - In windows command:
    - Ipconfig/all to show ip address
    - <mark>systeminfo</mark> →details about pc
  - In run command:
    - Type <mark>msinfo32</mark> for windows all details
